

The Shoulder Rehab Brace

The Physiohab Universal Shoulder Rehab Brace reinforces proper exercise mechanics as demonstrated by your Physical Therapist. It helps prevent shoulder hiking. Additionally, it helps retract the shoulder blades allowing for correct anatomical positioning to optimize rehab sessions.

Providing Two Important Roles In The Rehabilitation Process

1

USED DURING REHABILITATION SESSIONS

The Universal Rehab Brace ensures that at home rehabilitation exercises assigned by a Physical Therapist are done properly and safely.

2

USED AS A TRAINING AIDE.

Once a patient no longer needs to wear a post-operative brace, the patient can use the Universal Rehab Brace throughout the day as a “training aide” to prevent poor habits that can lead to longer rehabilitation time.
